ABOUT

The sky will be filled with stars, galaxies and other celestial objects. Selecting (pinching on) them will trigger messages from aliens of other planets or sounds of outer space. Some special objects like black holes, nebula and other cosmic objects will also expand and fill the sky upon being clicked adding in to the sense of wonder.

The experience will be time-bound like a tour which will give audience the freedom to interact and explore as much as they want within the given time-frame.

FROM THE LAST TIME

SKYBOX DISAPPEARS AUTOMATICALLY
BASE ON TIME

STARS SPAWN AND GIVE SOUND

UNPUBLISHED WEBSITE

FROM THE LAST TO-DO

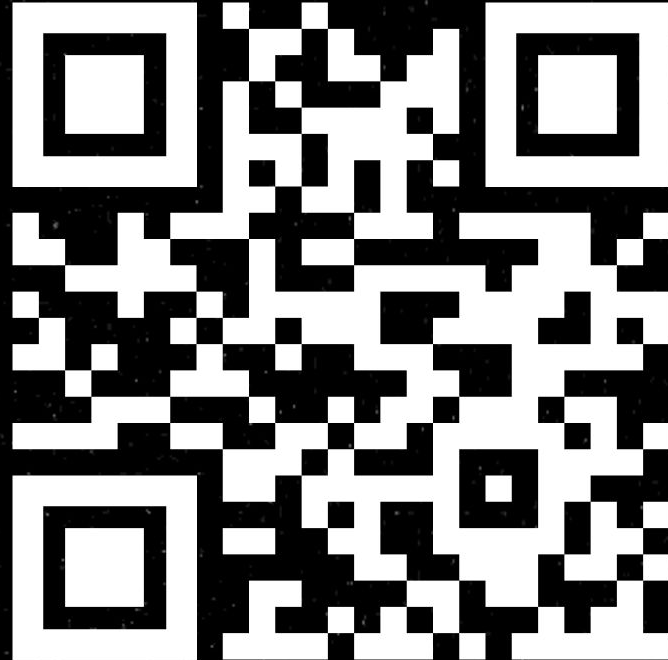

- Test with skybox sizes.
- Get accurate star positioning in relation to Earth's rotation.
- Make sounds and messages database.
- Implement special objects expanding (black holes, etc.)
- Scale stars according to their magnitude.
- Launch Website

FROM THE LAST TO-DO

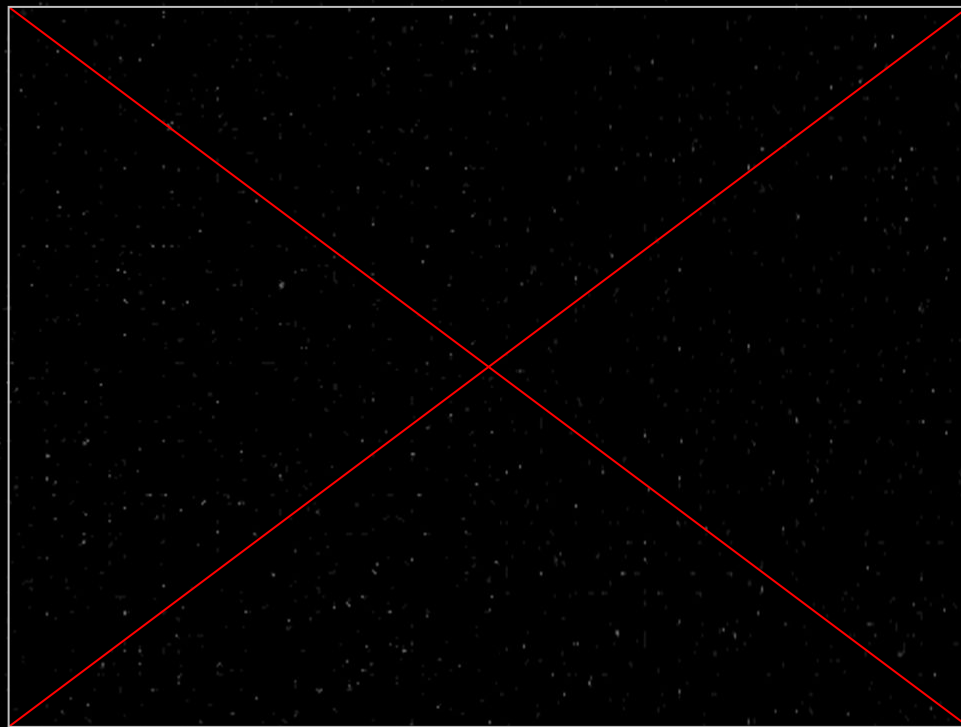

- Test with skybox sizes. ✓
- Get accurate star positioning in relation to Earth's rotation. ✓ (kind of)
- Make sounds and messages database. ✓
- Implement special objects expanding (black holes, etc.) ✓
- Scale stars according to their magnitude. ✓
- Launch Website ✓

WEBSITE

- Please scan the QR Code
- Allow Location Permission
- Zoom out when the globe is visible

VOICES FROM THE WORLDS BEYOND

USER TESTING

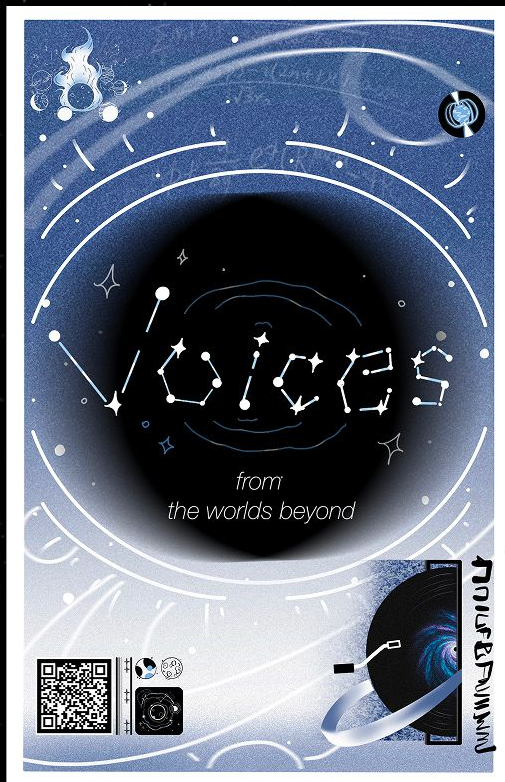

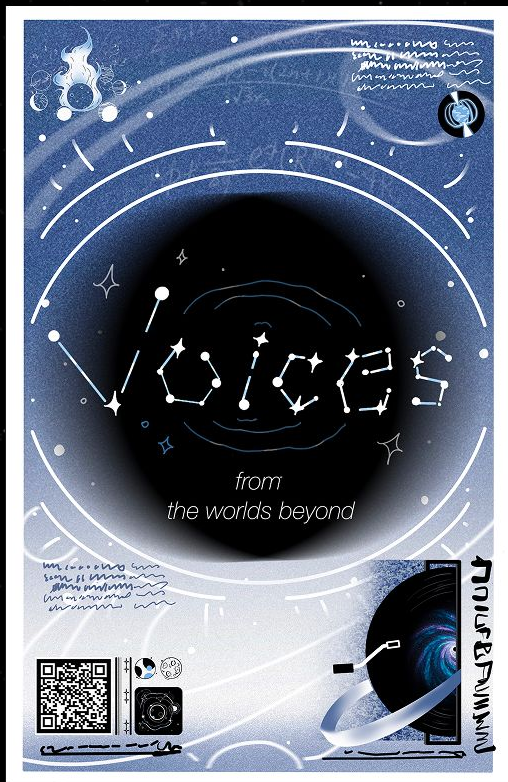

- Special Objects were really tough to spot
- Background noise affected the experience
- Accidental hovering triggered stars that the users did not mean to trigger.

NEXT STEPS

- Change interaction from hover to pinch and test between hover vs pinch for new VR users.
- Create a webpage with information of our team and project
- Solve the ISS Website problems
- Add more dialogues and closing lines
- Add more special objects
- Change material for the black hole to give warp effect.
